### Part III DETAILED ACTION

Claims 1-70 are currently pending.

#### Restriction Requirement

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-32, drawn to method of identifying proteins, classified in class 702, subclass 19. This Group is further divided into the following groups. Linking claims 1- will be examined with the selected group.
  - I.1 Claims 8-14, drawn to method further comprising receiving data representing amounts of cell signaling proteins, and producing coexpression coefficients.
  - I.2 Claims 15-22, drawn to method further comprising receiving data indicating phosphorylation states of proteins, and producing coregulation coefficients.
  - I.3. Claims 23-29, drawn to method further comprising producing linkage coefficients.

Serial Number: 09/715623

Art Unit: 1631

- I.4 Claims 30-32, drawn to method further comprising producing values representing physical properties of proteins.
- II. Claims 33-69, drawn to apparatus, classified in class 703, subclass 21. If elected, Group II will be further restricted to subgroups, similarly to Group I.
- III. Claim 69, drawn to computer medium, classified in class 550, subclass 170.
- IV. Claim 70, drawn to a computer data signal.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for their practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. MPEP § 806.05(e)(e) ). In this case, methods I can be practiced by another materially different apparatus, such as a calculator, or by hand.

Serial Number: 09/715623

Art Unit: 1631

Computer medium and computer signal of Groups III, IV are separate and patentably distinct from the methods of Group I because the method can be executed without a computer, and because a computer readable medium or a computer signal can contain any type of information, other than the instantly specified in claims 69,70.

Groups I.1-I.4 are related as independent and/or patentably distinct methods which they have different modes of operation, and different method steps.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because of their recognized divergent subject matter, and the necessity for non-coextensive literature searches restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if

Serial Number: 09/715623

Art Unit: 1631

one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
